

Bellringer #10

Write an equation of the line through each pair of points in slope-intercept form.

a) $(0, 3)$ and $(-2, -1)$
 x_1, y_1 x_2, y_2

$$y - y_1 = m(x - x_1)$$

$$y + 4 = -\frac{1}{2}(x - 9)$$

b) $(-7, 4)$ and $(9, -4)$
 x_1, y_1 x_2, y_2

$$y + 4 = -\frac{1}{2}x + \frac{9}{2}$$

$$y = -\frac{1}{2}x + \frac{1}{2}$$

Homework Questions?

PARALLEL AND PERPENDICULAR LINES

3-3 and 3-4

PARALLEL LINES: Lines that do not intersect.

They have the same slope.

PERPENDICULAR LINES: Lines that intersect at

a right angle (90°). They have opposite reciprocal slopes.

Writing opposite reciprocals.

- Make the slope a fraction, if not already.
- Flip the fraction.
- Change the sign. If negative make it positive.

If positive make negative.

Examples

$$\frac{3}{4} \quad -\frac{4}{3}$$

$$\frac{2}{1} \quad -\frac{1}{2}$$

$$-\frac{1}{3} \quad \frac{3}{1} = 3$$

Determine whether \overleftrightarrow{AB} and \overleftrightarrow{CD} are parallel, perpendicular, or neither.

Example 1.) $A(x_1, y_1)$, $B(x_2, y_2)$, $C(x_1, y_1)$, and $D(x_2, y_2)$

$$m = \frac{-5-1}{-1-1} = \frac{-6}{-2} = 3 \quad m = \frac{1-2}{6-3} = \frac{-1}{3}$$

Determine whether \overleftrightarrow{AB} and \overleftrightarrow{CD} are parallel, perpendicular, or neither.

Example 2.) $A(x_1, y_1)$, $B(x_2, y_2)$, $C(x_1, y_1)$, and $D(x_2, y_2)$

$$m = \frac{0-13}{11-14} = \frac{-13}{-3} = \frac{13}{3}$$

$$m = \frac{5-7}{-4+3} = \frac{-2}{-1} = 2$$

Determine whether \overleftrightarrow{AB} and \overleftrightarrow{CD} are parallel, perpendicular, or neither.

Example 3.) $A(x_1, y_1)$, $B(x_2, y_2)$, $C(x_1, y_1)$, and $D(x_2, y_2)$

$$m = \frac{2-6}{-9-3} = \frac{-4}{-12} = \frac{1}{3} \quad m = \frac{3-4}{2-5} = \frac{-1}{-3} = \frac{1}{3}$$

Determine whether the two lines are parallel, perpendicular or neither.

Example 4.) $y = 2x - 3$ and $y = 2x + 5$
parallel

Example 5.) $y = 3$ and $x = -1/3$

$$m=0$$

$$m = \text{undefined}$$

perp.

Determine whether the two lines are parallel, perpendicular or neither.

Example 6.) $y = 3x - 5$ and $3x - 2y = 4$

$$\begin{aligned} & -3x && -3x \\ & -2y = -3x + 4 \\ & \underline{-2} && \underline{-2} \quad \underline{-2} \\ & y = \frac{3}{2}x - 2 \end{aligned}$$

Graphing

Graph the following.

Example 7.) A line parallel to $y = 2x - 1$ and passes through $(2, 3)$

Graphing

Graph the following.

Example 8.) A line perpendicular to $y = 2x - 1$ and passes through $(2, 3)$

$$m = -\frac{1}{2}$$

Writing Equations

Example 10.) Write the equation of a line perpendicular to $y = -3x + 2$ and passes

through $(4, 0)$ $m = \frac{1}{3}$

$$y - 0 = \frac{1}{3}(x - 4)$$

$$y = \frac{1}{3}x - \frac{4}{3}$$

Writing Equations

Example 11.) Write the equation of a line parallel to $y = \textcircled{2}x - 5$ and passes through $(-1, 3)$
 $m = 2$

$$y - 3 = 2(x + 1)$$

$$y - 3 = 2x + 2$$

$$+3 \quad +3$$

$$\textcircled{y = 2x + 5}$$
